

Exercises HTML & CSS

Exercise 1:

Use HTML & CSS to create a 100px Square (Green) and a 100px Circle (Red).

Hints:

- Use a div for circle & a div for square with id
- Use width (px) to size square and circle
- Use color to color your shapes
- Use border radius to do the circle in %

Exercise 2:

Create a two-column Layout

HTML: Create a container div with two child **divs**: one for main content and one for a sidebar.

CSS Hints:

Use **display: flex** to place the content and sidebar side by side.

Set **width** on the sidebar to make it smaller than the main content.

Add **padding** and **border** to each section for separation.

Exercise 3:

Styled Button with Hover Effect

HTML: Add a button element inside a div.

CSS Hints:

Use **background-color** to set a button **color**.

Add **padding** to make the button larger.

Use **border-radius** to make the edges rounded.

Add **button :hover** style to change the **background-color** when the button is hover

Exercise 4 :

Build a Contact Page

1. Create the Basic HTML Structure

- **Step:** Start by setting up a new HTML document.
 - Add the `<!DOCTYPE html>` declaration at the top.
 - Use `<html>`, `<head>`, and `<body>` tags.
 - In the `<head>`, include a `<title>` tag with "Contact Us" or a similar title.

2. Add a Page Header

- **Step:** Inside the `<body>`, add a main header at the top.
 - Use an `<h1>` tag to say something like "Contact Us" or "Get in Touch."
- **CSS Styling Hints:**
 - Use `text-align: center` to center the header.
 - Apply `margin-top` and `font-size` to make it larger and more visually appealing.

3. Add a Brief Introduction

- **Step:** Below the header, add a short paragraph explaining how visitors can reach you.
 - Example: "Feel free to reach out through the form below. We'd love to hear from you!"
- **CSS Styling Hints:**
 - Set `font-size` slightly smaller than the header.
 - Use `text-align: center` to match the header's alignment.
 - Add `margin-bottom` to create some space between this paragraph and the form.

4. Create the Contact Form Structure

- **Step:** Set up a `<form>` element with input fields inside.
 - Inside the form, add labels and input fields for:
 - Name (`<input type="text">`)
 - Email (`<input type="email">`)
 - Message (`<textarea>`)
 - Add a "Submit" button (`<input type="submit">`) at the end of the form.
- **CSS Styling Hints:**
 - Use `display: block` on each label and input to make each field appear on a new line.
 - Add `margin-top` on each input and textarea to separate them visually.

5. Style the Form Elements

- **Step:** Inside your CSS file or `<style>` tag, style each form field.
- **CSS Styling Hints:**
 - Add padding inside the inputs and textarea to make them larger and easier to type in.
 - Use `width: 100%` on each input and the textarea for a full-width appearance.
 - Set `border-radius` to make the corners of the fields rounded.
 - Apply `border: 1px solid #ccc` to give a subtle border to each field.

6. Customize the Submit Button

- **Step:** Style the submit button separately to make it stand out.
- **CSS Styling Hints:**
 - Set a `background-color` (e.g., a color like blue or green) to make the button noticeable.
 - Use `color: white` for the text color on the button.
 - Add padding and `border-radius` to make it large and rounded.
 - Apply a `:hover` effect to change the background color slightly when the button is hovered over.

7. Add Contact Information (Optional)

- **Step:** Below the form, add a section with additional contact information, like an email address, phone number, or office address.
 - Use icons if possible (or placeholder text like "✉ Email" or "☎ Phone") to make it visually engaging.
- **CSS Styling Hints:**
 - Use text-align: center to align this section with the form and header.
 - Add margin-top and padding for spacing around each item.
 - Change the font-size and color for icons or labels to make them more distinctive.

8. Add Spacing and Layout Adjustments

- **Step:** Use additional CSS properties to polish the page layout.
- **CSS Styling Hints:**
 - Add margin around each major section (header, introduction, form, contact info) for clear separation.
 - Use a max width for the form (e.g., max-width: 600px) and center it with margin: 0 auto to keep it neatly aligned on the page.
 - Apply padding to the body or main container to create a comfortable amount of white space around everything.

9. Optional: Add a Background Color or Image

- **Step:** To add visual appeal, apply a background color or light image to the page or form section.
- **CSS Styling Hints:**
 - Use background-color on the body or form container for a subtle colored background.
 - For a background image, use background-image and set background-size: cover and background-position: center.
 - Add box-shadow to the form container to give it a subtle shadow for depth.

10. Test and Refine the Page

- **Step:** Open your page in a web browser and ensure all elements are aligned, styled, and responsive.
 - Adjust any spacing, colors, or font sizes as needed for readability and aesthetics.
